

THE *New* GRAVELY

ROTARY SAW

ATTACHMENT

Clearing land is quick and inexpensive with the GRAVELY Rotary Saw Attachment. Merely put the Saw in the horizontal position, put the tractor and attachment in gear and guide the machine—POWER does the work.

Harvesting forest land is a good way to add to your income. Here the GRAVELY Tractor with its Rotary Saw Attachment is felling slash pine for pulpwood. Notice the size of the tree being felled, and that the Saw goes to the job!

You bring new land into productive pasture or crop land easily, quickly and economically with the new GRAVELY Rotary Saw Attachment! One man, with this power-driven Saw clears land of brush and filth, cuts sprouts, weeds, saplings or trees, anything up to 18 inches through, in an amazingly short time compared to hand methods.

Besides clearing new land, you find a ready source of extra profit with the GRAVELY Rotary Saw Attachment. You can make the harvesting of woodland for lumber, cordwood or firewood, fence posts, pulpwood, mine props and railroad ties profitable with power equipment when it wouldn't be if you had to use slow hand methods.

Whether you have a farm, estate, home or woodland, you need the Rotary Saw because it will do these clearing and cutting jobs with only the fraction of the effort and expense you would ordinarily use.

You can pay for the Rotary Saw Attachment in less than one season's work by the savings you make in time, and in the case of paid help, in actual labor cost! You can do ten times more work in the same amount of time with the GRAVELY Rotary Saw!

Besides the savings in time and labor cost, remember that you can actually make good profits from your woodlot, or from clearing and putting into crops or pasture the land that was uneconomical to clear by hand methods! Think what this will mean to you!

THE GRAVELY ROTARY SAW WILL HELP YOU - - - -

On The Farm

You supplement your income during the season when you cannot actively farm your land! During this slack time you can clear new land to put in crops or pasture next year, or you can harvest your woodlot or forest land for fence posts, cordwood or firewood, mine props, railroad ties and pulpwood.

On The Country Place

You use the GRAVELY Rotary Saw to cut your firewood or cordwood. You cut the brush and saplings on your land to make your home look more beautiful by giving it cleared, neat surroundings. This will enhance the value of your property, besides the pride you will have in a well-kept home and grounds.

In The Woods

You have a *portable*, self-propelled, power-driven saw for all of your wood-cutting jobs. You take the saw to the timber, fell it and then cut it up with the same saw. It will speed up your work, give you more profits for less time and labor.

At The Park or Recreational Area

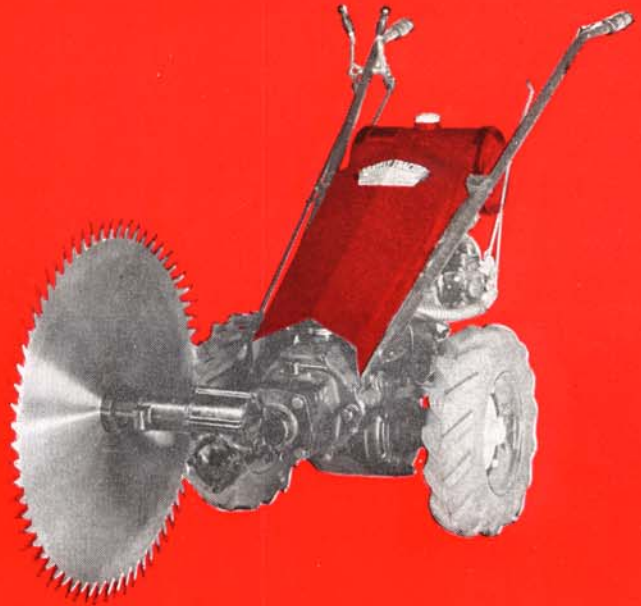

This portable, self-propelled saw will saw your firewood quickly and easily. It will clear your roads and trails, bring new areas into active use. You will be able to keep brush and saplings down in used areas, keep scenic views clear—and eliminate hand labor and its high costs!

In The City Or Town

The powerful GRAVELY Power Driven Rotary Saw will keep brush and saplings away from your signs, hydrants, reservoirs and other city facilities. You will be able to use one or two men and clear land for city playgrounds and parks for the use of your people.

At The Cemetery or Memorial Park

You will use a powerful, self-propelled, inexpensive means of bringing new acreages into your Cemetery or Memorial Parks without paying huge costs for hand labor.

GRAVELY 2-POSITION, POWER DRIVEN ROTARY SAW ATTACHMENT

Compact and perfectly balanced, the GRAVELY Rotary Saw is easy to handle no matter what your sawing job.

The Saw has two positions, vertical and horizontal. A bolt-secured locking mechanism assures you of a rigid, safe mounting. In the Horizontal position you clear land or fell timber up to 18 inches or more through. When the Saw is in the Vertical position you can trim and cut the felled timber with ease.

You take the Saw to the job under its own power. No carrying or setting up to do—just run the saw up to the job, put the attachment in gear and let the saw do the work for you.

26 inch Saw Blade of Grade A Steel. The blade is file temper, for easy sharpening in the field. Teeth have a Cordwood Set, which gives you a wide "bite", helps prevent binding by giving the blade plenty of room to follow the teeth into the cut.

PLENTY OF POWER WITH THE 5 HP GRAVELY

A saw is only as good as its power plant. The powerful 5 HP 4-cycle engine of the GRAVELY Tractor packs plenty of power for the toughest sawing jobs—proved by many tests and the satisfaction of GRAVELY users.

There is no loss of power with the GRAVELY, because both the tractor and the attachment are gear driven direct from the motor of the Tractor. No belts or chains to slip, break or wear!

The GRAVELY has an automotive-type transmission running in a bath of oil. This means that you have one-spot lubrication, and long life from your machine.

Maneuvering the GRAVELY is easy, because you have throttle-controlled speeds, two forward and two REVERSE. No tugging or pulling to get into position with the GRAVELY, the tractor does the work.

There is no danger of damage to your saw or to the tractor by a sudden pinch of the blade or by striking obstacles. Instead, the GRAVELY slip clutch protects your attachment and tractor by slipping a quarter turn, dissipating the shock, and stalling your machine before any damage has been done.

ONE OF 19 ATTACHMENTS

Remember that the Rotary Saw Attachment is only one of 19 time and labor saving tools for use with the powerful 5 HP GRAVELY Tractor. These include: 42 inch Sickle Mower for brush and weeds; 30 inch Reel Mower; 25 inch Gang Units which, when attached to 30 inch unit, gives you a mower that cuts a 72 inch swath; Hauling Cart, 1/2 ton capacity; Riding Sulky; Sprayer; power-driven Rotary Plow; Cultivating Tools; Snow Plow; Power Brush; and others. Ask for New Catalog, Power vs. Drudgery.
